RAPHAEL FERREIRA COELHO SANTOS

Lead Cloud Architect, Platform and DevOps | AWS, Google Cloud, Azure | Terraform, Kubernetes, FinOps

São Paulo, Brazil (UTC-3, overlaps US Eastern business hours) · Open to remote work as employee, B2B contractor or through an EOR

+55 11 99213-2911 · raphaelfcs@gmail.com · linkedin.com/in/raphael-ferreira-coelho-santos · raphaelfcs.github.io/portfolio · github.com/Raphaelfcs

SUMMARY

Cloud architect with 16 years in IT, the last 9 spent on DevOps and cloud platforms in AWS, Google Cloud and Azure. I work on both sides of the platform. I lead the architecture of a Cloud Center of Excellence, where we moved account provisioning to AWS Control Tower and Account Factory for Terraform and brought the wait for a ready-to-use account **down from 22 days to 2**. I also still build and run Kubernetes on EKS, GKE and AKS, from new clusters to version upgrades and blue-green migrations with **no downtime**, with Helm charts shipped through Argo CD. Before that I worked for IT consultancies in banking, insurance and energy on pre-sales architecture, migrations and FinOps, including a backup cost fix that saved an insurance client **$100K a month**.

SKILLS

AWS: Control Tower, Account Factory for Terraform, Organizations with SCPs and RCPs, IAM Identity Center, VPC, Transit Gateway, Route 53, EventBridge, Lambda, EKS, Bedrock, Textract

Kubernetes: EKS, GKE, AKS and OpenShift; cluster builds, upgrades and blue-green migrations; Helm, Argo CD, Istio, Docker, Prometheus

Delivery: Terraform with tests, GitLab CI, GitHub Actions, Azure Pipelines, Jenkins, SonarQube, canary releases, image build and verification

Architecture and FinOps: C4 diagrams, pre-sales and business cases, landing zones and guardrails, cloud migrations to AWS, Google Cloud, Azure and OCI, cost governance

EXPERIENCE

Lead Cloud Architect | Druid — Mar 2025 – Present

Remote · Cloud Center of Excellence (CCoE)

- Rebuilt the Cloud Center of Excellence so product teams can move on their own while the company keeps control of security, cost and network rules.
- Replaced a manual account request process, with little cost visibility and a lot of hand-made network changes, with **AWS Control Tower and Account Factory for Terraform**. New production and test accounts now come with the guardrails already in place, and onboarding went **from 22 days to 2**.
- Wrote the standards that let AWS and Azure run under one governance model, covering landing zones, network and security guardrails, and how the two clouds connect.
- Helped set up the FinOps practice and built QuickSight dashboards with anomaly detection that alert on business KPIs.
- Still hands-on: I write Terraform modules and pipelines with the teams, and they call me for critical EKS and GKE cases, from version upgrades to moving workloads to a new cluster.

DevOps Engineer (freelance) | FIS — Aug 2025 – Dec 2025

Remote · freelance contract in parallel with the Druid role

- Terraform for AWS and EKS workloads, Azure Pipelines with canary releases, and FinOps habits for the DevOps team.

Lead Cloud Architect | TIVIT — Jan 2024 – Mar 2025

IT consultancy · client engagements · Remote

- Ran pre-sales architecture for cloud deals, from requirement workshops with clients to C4 diagrams, cost estimates and the business cases presented to the executive board.
- Traced an AWS Backup cost anomaly at an insurance client and redesigned the SCP guardrails around it. Savings reached **$100K a month, a $700K breakeven in 7 months**.
- Designed and delivered an OCR solution on Amazon Textract and Amazon Bedrock that reads contract data at scale. I also coordinated the new automation team and mentored junior architects.
- Planned migrations from on-premises to AWS, GCP and OCI, starting with service discovery to avoid surprises in cost and cutover, and built the Terraform modules and pipelines to run them.

Lead Cloud Architect | Engineering Brasil — Jul 2022 – Dec 2023

IT consultancy · client engagements

- Led pre-sales architecture across Google Cloud, AWS and Azure, including cost and business case estimates for new deals.

- Defined shared standards for security, networking and IaC across the three clouds, plus the connectivity model between them.
- Designed Kubernetes microservice platforms and CI/CD in GitLab CI, GitHub Actions, Azure DevOps and Jenkins, and set up FinOps practices and KPIs for enterprise clients.

Senior Software Engineer | Itaú Unibanco — Apr 2022 – Jul 2022

Consulting engagement

- Worked on Camada Zero, the program that moved core services from a monolith to microservices on Kubernetes, building pipelines for monoliths, microservices, serverless and IaC.
- Connected GitLab CI to Jira so that moving a card triggered the delivery automation, and took care of cluster administration and application images.

Cloud Architect | Grupo FCamara — Aug 2020 – Apr 2022

IT consultancy · client engagements

- Wrote Terraform modules for Azure, GKE and AWS for a digital bank, deployed OpenShift and set up Azure Pipelines with canary releases.
- Delivered the Open Finance infrastructure as code for three large Brazilian banks, with microservices on EKS and AKS.
- Reorganized the company's own AWS accounts and led FinOps and governance work. Reusable modules took environment delivery **from weeks to minutes**, with disaster recovery at the lowest cost we could get.

DevOps Engineer | BBCE (Brazilian energy exchange) — Mar 2020 – Aug 2020

Consulting engagement

- Terraform on AWS and EKS for the company's microservices, Azure Pipelines with canary deployments, and the first IaC and FinOps standards for the DevOps team.

Earlier experience

- **2017 to 2020, DevOps Engineer** at Mandic Cloud Solutions, Pitang and ViViTech (consulting engagements). Rebuilt manual infrastructure as Terraform on AWS, moved on-premises applications to AWS and monoliths to Kubernetes, and ran GitLab CI and Jenkins pipelines with SonarQube and canary releases.
- **2010 to 2017, infrastructure, network and Linux roles.** IT technician in the Military Police, maintaining the unit network and its Linux servers (2010 to 2011); network analyst at Logicalis (2011 to 2013); communications sergeant in the Brazilian Army, leading the communications section (2013 to 2015); Linux analyst at Processor, automating with Puppet, Ansible and Python (2015 to 2017).

OPEN SOURCE AND WRITING

automacao_terraform on GitHub: 77 reusable Terraform modules for AWS, Google Cloud and Azure, each with tests, examples, a diagram and CI, plus a patient documents reference app running active-active on AWS and Google Cloud. Architecture write-ups with diagrams and cost notes at raphaelfcs.github.io/portfolio.

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate, Amazon Web Services (2023)
- FinOps Certified Engineer (2025), FinOps Certified Practitioner (2024), Introduction to FinOps and Introduction to FOCUS (2024), FinOps Foundation
- LFS162 Introduction to DevOps and Site Reliability Engineering (2025) and LFS142 Introduction to Backstage (2024), The Linux Foundation
- Introduction to Generative AI, Large Language Models and Responsible AI (2024) and Google Cloud Essentials (2023), Google Cloud
- GitLab Certified Git Associate; AWS Educate Getting Started with Networking (2025); Uncomplicating Kubernetes and Istio, LINUXtips
- Cloud Computing Solutions Architect and Cloud Computing DevOps Engineer, FIAP (2022); English Certificate C2, International English Test (2024)

EDUCATION AND LANGUAGES

MBA in Technology Leadership (CTO/CIO), FIAP, 2024 – 2025
Associate Degree (Tecnólogo) in Cloud Computing, FIAP, 2020 – 2022
Bachelor of Science in Computer Science, UniFieo, 2010 – 2013
Portuguese (native) · **English** (professional working proficiency)
