RAPHAEL FERREIRA COELHO SANTOS

Lead Cloud Architect | AWS · Multi-Cloud (Google Cloud, Azure) · FinOps · Terraform

São Paulo, Brazil (UTC-3, full overlap with US Eastern hours) · Remote: full-time, B2B contractor or EOR

raphaelfcs@gmail.com · linkedin.com/in/raphael-ferreira-coelho-santos · raphaelfcs.github.io/portfolio · github.com/Raphaelfcs

SUMMARY

Lead Cloud Architect with 18 years in IT and 9+ in DevOps and cloud architecture on AWS, Google Cloud and Azure. I lead the architecture of a Cloud Center of Excellence: AWS Control Tower and Account Factory for Terraform landing zones, multi-cloud governance and FinOps. My platform work shows up in business numbers: **account provisioning cut from 22 days to 2** and a **$700K cost breakeven in 7 months** for an insurance client. Hands-on with Terraform, Kubernetes (EKS, GKE, AKS) and CI/CD, combined with pre-sales architecture for executive boards and mentoring of architects.

SKILLS

AWS: Control Tower, AFT, Organizations (SCP/RCP), IAM Identity Center, VPC, Transit Gateway, Route 53, EventBridge, Lambda, EKS, Bedrock, Textract, QuickSight

Google Cloud / Azure / OCI: GKE, Cloud Run, Shared VPC, landing zones; AKS, Azure DevOps; OCI migrations

Architecture & FinOps: C4 model, pre-sales and business cases, cloud migrations, landing zones, guardrails, cost governance, anomaly detection, FOCUS

IaC & delivery: Terraform (modular monorepos, terraform test), GitLab CI, GitHub Actions, Azure Pipelines, Jenkins, Argo CD, Helm, canary releases

Platforms: Kubernetes (EKS, GKE, AKS, OpenShift), Docker, Istio, Prometheus, Linux, Python, Bash

EXPERIENCE

Lead Cloud Architect | Druid — Mar 2025 – Present

Remote · Cloud Center of Excellence (CCoE)

- Lead the CCoE architecture: restructured the area so product teams work autonomously under organization-wide controls aligned with FinOps and DevOps practices.
- Replaced manual, low-visibility account provisioning with **AWS Control Tower and Account Factory for Terraform**: production and test accounts now arrive with security, connectivity and cost guardrails, cutting developer onboarding **from 22 days to 2**.
- Define cross-cloud standards for AWS and Azure (landing zones, network and security guardrails, connectivity model) so both platforms run under a single governance framework.
- Helped structure the FinOps function and built AI-assisted dashboards in AWS QuickSight for cost anomaly detection and business-KPI alerting; support critical EKS and GKE cases and keep building Terraform modules and pipelines with the teams.

DevOps Engineer (freelance) | FIS — Aug 2025 – Dec 2025

Remote · freelance contract in parallel with the Druid role

- Terraform automation for AWS, EKS workloads and Azure Pipelines CI/CD with canary releases and progressive-delivery standards; brought FinOps practices into the DevOps team.

Lead Cloud Architect | TIVIT — Jan 2024 – Mar 2025

IT consultancy · client engagements · Remote

- Led pre-sales cloud architecture: scoped client requirements, designed C4-based solutions and produced cost estimates and business cases for proposals presented to the executive board.
- Found an AWS Backup cost anomaly at an insurance client and redesigned the SCP guardrails around it: **$100K/month saved, a $700K breakeven in 7 months**.
- Designed and delivered an AI-driven OCR solution (Amazon Textract, Amazon Bedrock) that extracts and processes contract data at scale; coordinated the new automation team and mentored junior architects.
- Structured on-premises migrations to AWS, GCP and OCI with service-discovery analysis to avoid migration errors and unplanned cost; built the Terraform modules and pipelines that delivered the designs.

Lead Cloud Architect | Engineering Brasil — Jul 2022 – Dec 2023

IT consultancy · client engagements

- Led pre-sales architecture across Google Cloud, AWS and Azure: solution design plus cost and business-case estimates to close new business.

- Set unified multi-cloud standards (security, networking, IaC patterns) and the interconnectivity model that let workloads and teams operate consistently on the three clouds.
- Designed Kubernetes microservices platforms and CI/CD with GitLab CI, GitHub Actions, Azure DevOps and Jenkins; structured FinOps practices and KPIs for enterprise customers.

Senior Software Engineer | Itaú Unibanco — Apr 2022 – Jul 2022

Consulting engagement

- Camada Zero program: moved core services from a monolith to microservices on Kubernetes, with pipelines for monoliths, microservices, serverless and IaC.
- Integrated GitLab CI with Jira so moving a card triggered the delivery automation; administered Kubernetes clusters, deployments and application images.

Cloud Architect | Grupo FCamara — Aug 2020 – Apr 2022

IT consultancy · client engagements

- Built Terraform modules for Azure, GKE and AWS for a digital-bank client; deployed OpenShift and Azure Pipelines with canary releases.
- Delivered Open Finance infrastructure as code for three large Brazilian banks, with microservices on EKS and AKS.
- Restructured the company's AWS accounts and led FinOps and governance projects; reusable Terraform modules cut environment delivery **from weeks to minutes**, with disaster recovery at the lowest operating cost.

DevOps Engineer | BBCE (Brazilian energy exchange) — Mar 2020 – Aug 2020

Consulting engagement

- Terraform on AWS and EKS for microservices, Azure Pipelines CI/CD with canary deployments; set the IaC and progressive-delivery standards and shaped the DevOps team around FinOps.

Earlier experience

- **2017 – 2020 · DevOps Engineer** at Mandic Cloud Solutions, Pitang and ViViTech (consulting engagements): rebuilt manual infrastructure as Terraform on AWS, migrated on-premises applications to AWS, moved monoliths to Kubernetes, and ran GitLab CI and Jenkins pipelines with SonarQube and canary releases.
- **2008 – 2017 · Infrastructure, network and Linux roles:** IT technician in the Military Police (network maintenance and Linux administration), communications sergeant in the Brazilian Army, data-center network analyst and IT specialist with Puppet, Ansible, Chef and Cisco.

OPEN SOURCE & WRITING

automacao_terraform: monorepo of 77 reusable Terraform modules (AWS, Google Cloud, Azure) with tests, examples, diagrams and CI per cloud, plus a reference app for patient documents running active-active on AWS and Google Cloud. Architecture articles with diagrams, Terraform and FinOps at raphaelfcs.github.io/portfolio.
